Expert additions to period buildings

EUROPA

contemporary craftsmanship

Traditional, high quality craftsmanship is once again in demand.

We have been creating luxury additions to beautiful buildings through the design and supply of aluminium-framed structures since 1993. Now our combined experience totals over 50 years, and we're still working with many of the partners who joined us at our inception.

Perhaps that's because we offer a highly respected, comprehensive service which covers every aspect of the project, from initial designs, through surveys and structural engineer's calculations to installation advice and technical support.

We manufacture conservatories, striking roof lanterns, slope glazing systems and canopies, all well-disposed to transform your home, improve your lifestyle and add value to your property.

Imagine this.

You're cocooned in nature, protected from the elements but enveloped in the ever-changing scenery of the seasons in rotation.

The year plays out its private performance – the summer sun's rays illuminate dancing motes of dust; autumn's furled leaves drop gently all around; the sharp winter sky reveals a canopy of sparkling stars; tiny drops of spring rain patter softly onto glass.

Luxury conservatories betray a certain kind of lifestyle, one in which these details can be savoured, relished. In company or alone,

sharing a drink or lost in a book, it isn't an exaggeration to say a thoughtfully designed addition to your home can improve the quality of your life.

Europa's conservatories are bespoke. We use the finest slim aluminium frames for a structurally sound framework which is sympathetic both to the building it augments and the environment around it. Regardless of the age or style of your home, we can design a beautiful conservatory to enhance it.

## Aluminium

Aluminium is an inherently strong and flexible material. More enduring than wood and uPVC, it doesn't rot or warp and ensures a tight fit for unbeatable security. It can be powder-coated in the full spectrum of colours and is virtually maintenance free, and the thermally insulated framework provides an excellent barrier from the elements. A dual-colour system is also available allowing different colours to be used outside and in.

We offer the latest in glazing, from self-cleaning glass to solar shading, and a variety of ventilation options including fanlights, sashes or automatically controlled vents.

Strength and beauty, designed to last.

A beautifully crafted roof lantern is a window onto the sky. It frames the colours of dawn and dusk, the gentle passage of the clouds, and allows natural light to spill through, flooding every crevice of your room.

Europa roof lanterns are designed and manufactured with the same imagination and attention to detail as our conservatories. Supported by strong but elegant aluminium framework, coloured to reflect the surroundings or work in contrast, they create a dramatic focal point and realise the aesthetic potential and value of your property.

Our highly qualified craftsmen work with the best materials, so every one of our products is hand-made to the highest standards.

Each finished product is delivered to site ready to assemble after custom factory manufacture and thorough quality inspection. We guarantee the aluminium frame, its fabrication, the extrusion and powder coating for 10 years.

So - to add value to your home or to create a new space in which to relax or entertain, let us help you plan your dream.
